Opera Launches MiniPay, a New Stablecoin Wallet Built on the Celo Blockchain, to Onboard Millions of Users Across Africa to Web3

September 13, 2023 at 8:30 AM EDT

- MiniPay empowers rapid stablecoin transfers across Africa for a best-in-class mobile payment experience, combining the convenience of Web2 with the power of Web3
- Since MiniPay is built directly into Opera Mini, Opera’s popular mobile browser, millions of users throughout Africa will be introduced to the benefits of stablecoin payments & Celo’s decentralized applications (dApps)
- MiniPay’s rollout begins in Nigeria, and will expand to Kenya, Ghana, South Africa, and beyond in the coming months

Introducing MiniPay: Empowerment Through Innovation

Opera designed and built MiniPay in collaboration with the Celo Foundation, enabling rapid wallet-to-wallet stablecoin transfers with sub-cent fees using mobile phone numbers and fast onboardning with automatic wallet backup through Google. All, while addressing some of the key barriers allowing for a seamless Web2 to Web3 journey for users looking for a more reliable way to store and send funds using stablecoins.

With an easy onboarding process using Google credentials, MiniPay ensures that every user experiences prompt digital asset transfers and a smooth introduction to Web3 transactions. In contrast, many non-custodial wallets require users to be crypto-savvy. The most common reason people lose their digital assets are the complexities around key management – forgetting the secret recovery phrase and passwords. MiniPay’s goal is to make decentralized wallets intuitive so that users of all experience levels can transact. By automatically backing up the user’s keys in their own Google Drive, MiniPay enables users to recover their wallet if they lose their phone or simply reinstall the app. The wallet’s foundation is built on speed, reliability, and financial inclusivity, making it an indispensable tool for users across Africa.

Opera brings simplicity to this by integrating with the top partners in the market supporting local payment methods such as Airtime, MPesa, Bank Transfer, or Cards. MiniPay is a non-custodial wallet which means that it doesn’t touch any traditional banking rails and relies on local partners so users can add and withdraw stablecoins from their wallet into their local currency. MiniPay will also support Celo’s FiatConnect standard, which has a growing number of integrated partners and will further improve the Cash-In-Cash-Out experience globally.

Opera and Celo: A Vision for Financial Inclusion and Empowerment

As a key steward of the Celo ecosystem, the Celo Foundation is dedicated to bringing affordable and accessible DeFi to mobile users around the world. This and Opera’s focus on improving access to the digital world are a joint vision the two organizations share. Opera emerged as a tech pioneer in the African market more than 17 years ago, unveiling its unique data-saving technology through Opera Mini. Now one of the most popular apps and well-known brands in Africa, Opera counts over 100 million users across the continent. By integrating MiniPay into the Opera Mini browser, new and existing users will be able to experience fast and transparent transactions on the Celo blockchain, and be introduced to dApps and projects built on the Celo network.

“We are thrilled to unveil MiniPay, a cutting-edge partnership between Opera and the Celo Foundation that addresses existing concerns around how payments are made in the region. Users in Nigeria, Kenya, Ghana, and South Africa have indicated that there are lingering concerns about high fees, unreliable service uptimes, a lack of transparency around transaction progress, and a lack of access to mobile data. This partnership therefore represents a pivotal moment in the world of digital finance, with the ability to send, receive, and ultimately earn money in a permissionless way,” said Jørgen Arnesen, EVP Mobile at Opera.
The Celo blockchain first launched on Earth Day 2020 with the mission of fostering a thriving collective of active builders, developers, founders, and community members committed to blockchain technology’s positive impact. With over 1,000 global projects in more than 150 countries, the Celo blockchain is carbon-negative and mobile-first, with many enterprise and institutional partners including Deutsche Telekom, Telefónica, and many more.

Additionally, Celo’s core technical features, on top of which MiniPay is built, include:

- Sub-cent transaction fees (and the ability to pay for fees using stablecoins)
- Fast transaction speed with 5-second settlement in seconds
- Seamless access to Celo’s rich ecosystem of 1,000+ dApps, from locally-focused UBI (e.g., impactMarket) to global decentralized finance (DeFi) blue chips (e.g., Uniswap)
- Celo’s mobile-first compatibility with SocialConnect (a privacy-first naming service protocol that maps wallets to mobile phone numbers) and FiatConnect (an open on-/off-ramp API standard that facilitates Cash-In-Cash-Out integrations).
- Tapping into Celo’s vibrant African community, with a strong focus on regenerative finance (ReFi), grown since mainnet launched on Earth Day 2020

“Few companies have the global footprint, local insight, and technical capabilities that Opera brings to the Celo ecosystem; I am excited to work even more closely with their team on what I see as a key building block to help realize Celo’s mission at scale,” said Rene Reinsberg, Celo Co-Founder and Celo Foundation President. “By integrating the non-custodial MiniPay wallet directly into the popular Opera Mini browser, new and existing users will access a truly seamless experience with fast, transparent transactions on the Celo blockchain and be introduced to dApps and projects built on Celo that provide meaningful benefits for people in their everyday lives—this is the ‘killer’ use case the Web3 industry has been waiting for.”

Building for MiniPay

Following a vote by the Celo community in July to migrate from a Layer-1 blockchain to an Ethereum Layer-2, the Celo network will undergo technical upgrades to see increased security and scalability while maintaining low gas fees, bringing more real-world use cases to the Ethereum community. This technical migration, led by the Celo community and core contributors, including cLabs, opens the door for even more Ethereum-compatible dApps to be built for MiniPay, reimagining the future of on-chain finance for community advancement and inclusion in the new digital economy.

MiniPay will become available to Opera Mini users across Africa within the coming months, first launching in Nigeria.

About Opera Mini

Launched in 2006, Opera Mini is a small, fast, and powerful browser. It comes with unique features such as Data Compression, Offline File Sharing, and a built-in ad-blocker. Today, Opera Mini is used by millions of people who chose it over the pre-installed browsers on Android mobile devices. Opera Mini has a 4.3 star rating on Google Play and has been reviewed by more than eight million people worldwide.

About Opera

Opera is a web innovator building on more than 25 years of innovation that started with the Opera web browser. While Opera is leveraging its brand and engaged user base in order to grow and develop new products and services for people who seek a better internet experience, Opera’s PC and mobile web browsers, content discovery platform Opera News, and apps dedicated to gaming, Web3 and e-commerce are already the trusted choices of hundreds of millions of active and engaged users. Opera is headquartered in Oslo, Norway, and listed on the NASDAQ Stock Exchange under the OPRA ticker symbol. Download and access Opera's products and services from www.opera.com.

About Celo

Celo is a carbon-negative, emerging Ethereum layer-2 blockchain with a rich ecosystem of global partners building innovative Web3 applications within the DeFi, ReFi, and NFT sectors on Celo. Accessible to anyone with a mobile phone, the Celo ecosystem consists of a decentralized, proof-of-stake blockchain technology stack (the Celo Platform), the CELO native token, and several Mento stable assets (cUSD, cEUR, cREAL) that enable anyone to use digital assets. Launched on Earth Day in 2020, the open-source Celo mainnet supports 1,000+ projects by developers and creators located around the world.

About the Celo Foundation

The Celo Foundation was founded to support the growth and development of the decentralized, open-source, mobile-first Celo platform to help build a regenerative financial system that creates the conditions of prosperity for all. The Foundation is guided by the Celo community tenets and contributes to education, technical research, environmental health, community engagement, and ecosystem outreach—activities that support and encourage an inclusive financial system. For more about Celo, visit https://celo.org/.

1 MiniPay is a wallet built on the Celo blockchain and offered by Opera Group company Blueboard Limited (herein, "Opera"). Opera does not provide investment or any other financial advice of any kind. Purchasing crypto assets, as well as investments and lending linked to crypto assets, involves significant risk. When investing in cryptocurrencies, you risk losing your entire investment. Please consider whether trading and owning cryptocurrencies is appropriate for your financial situation.

2 Research conducted by Opera via Pollfish and Sparrow in July 2023. The total number of respondents from South Africa, Kenya, Ghana, and Nigeria is over 5700.
